

regular control flow of the program

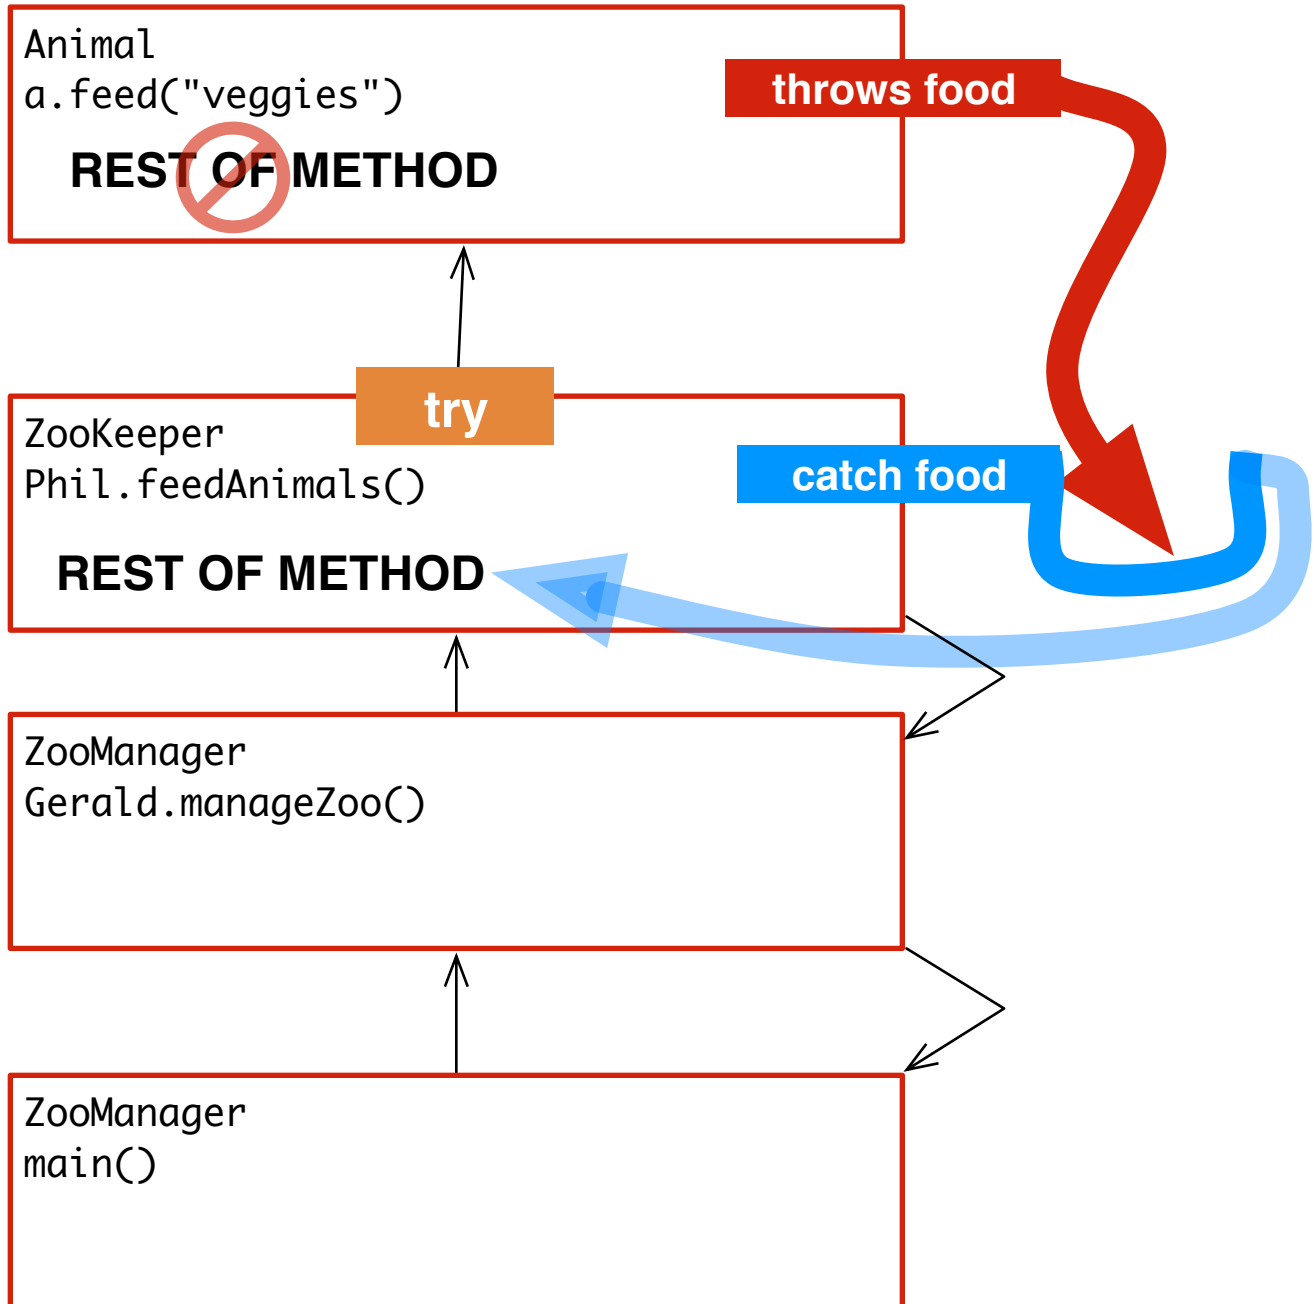

throw all the way up

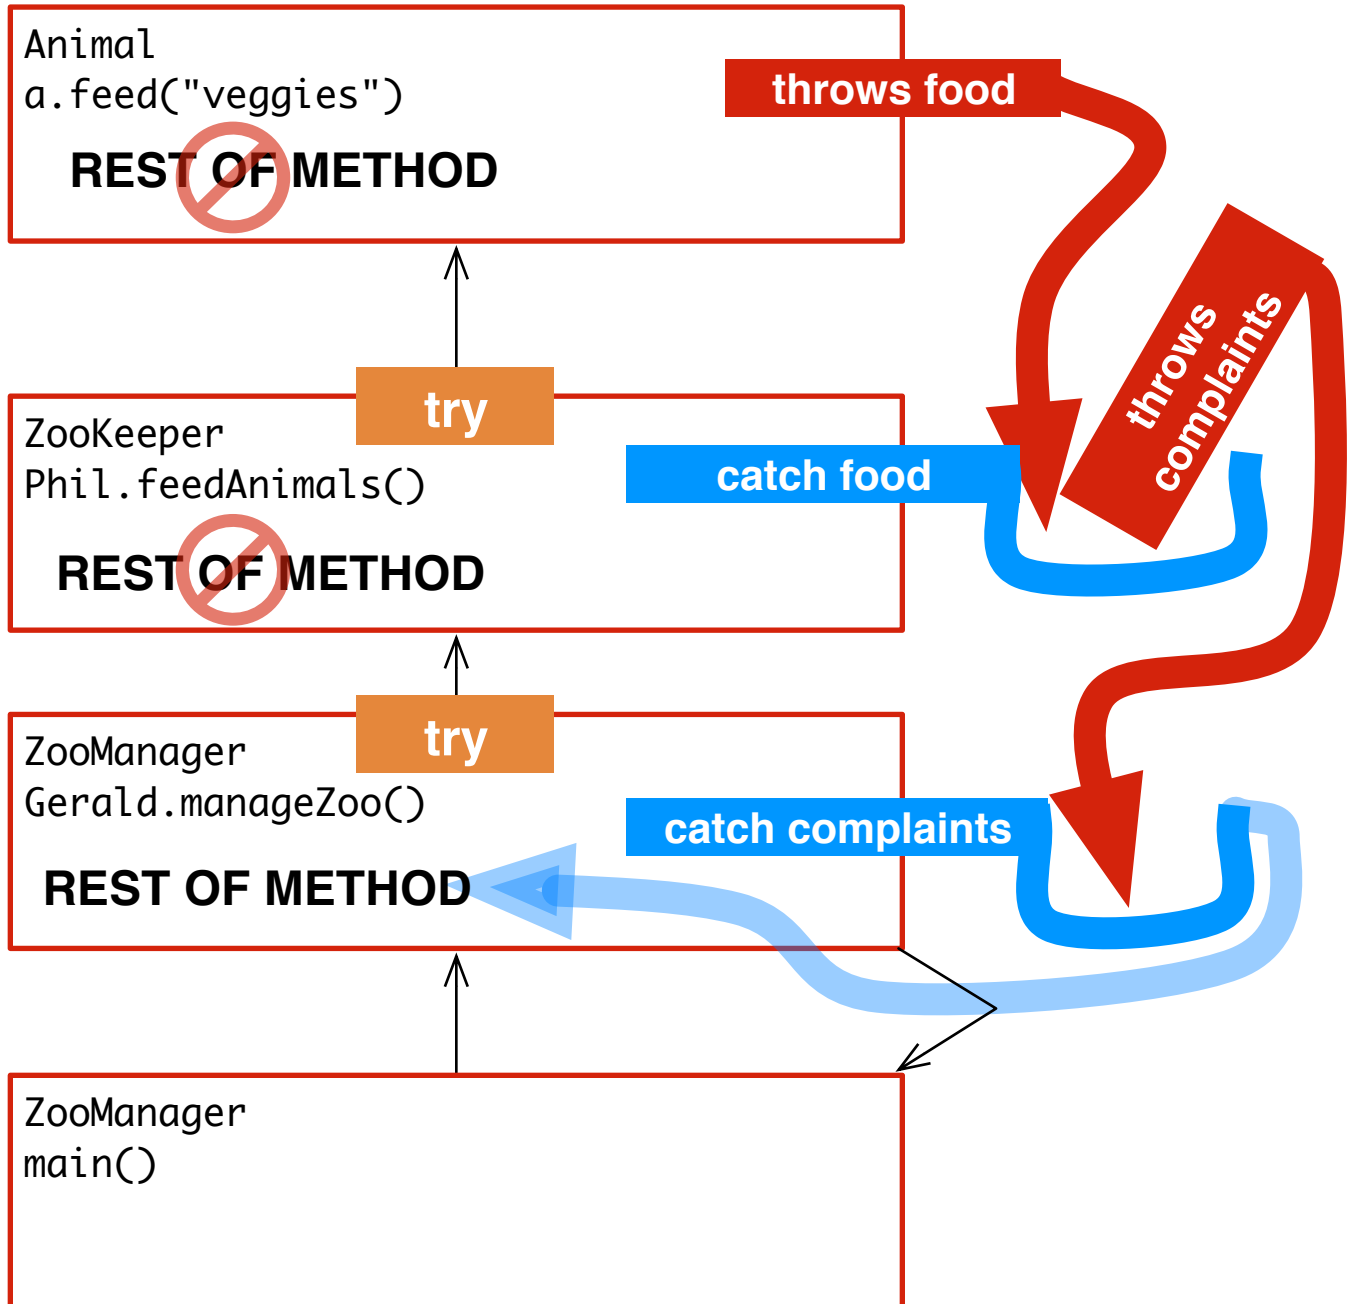

(no try/catches -- just throws declarations)

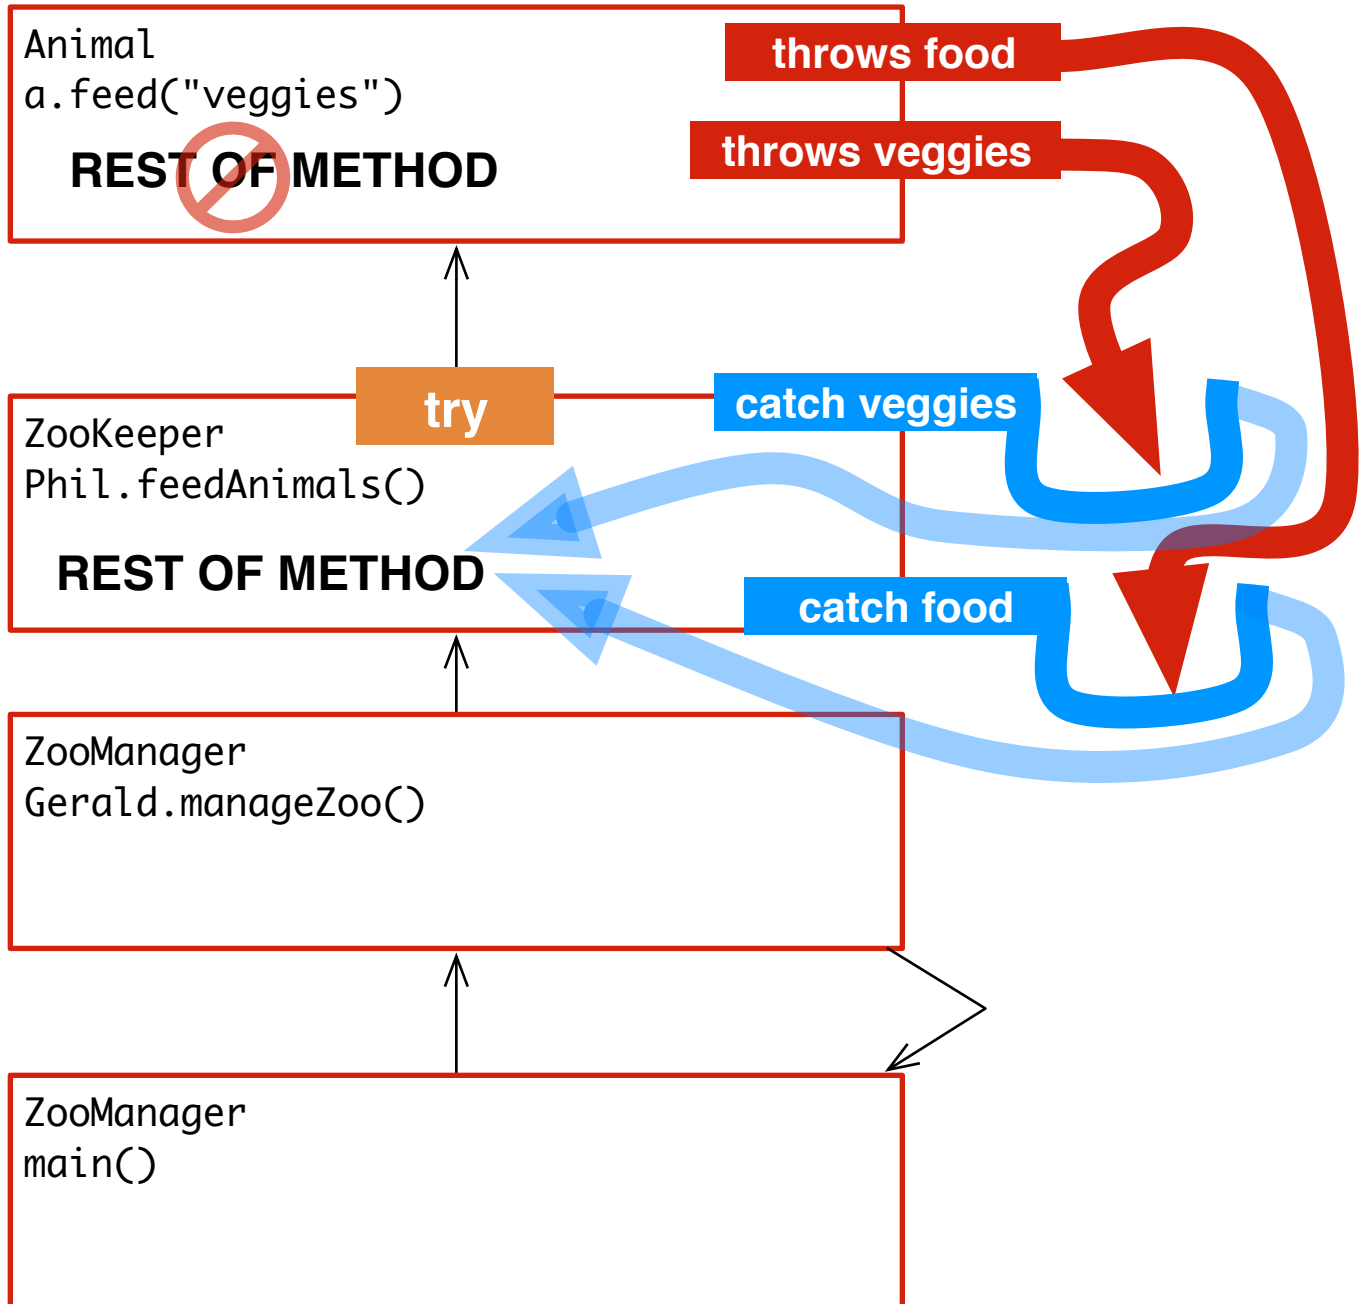

throw all the way up
catch the exception

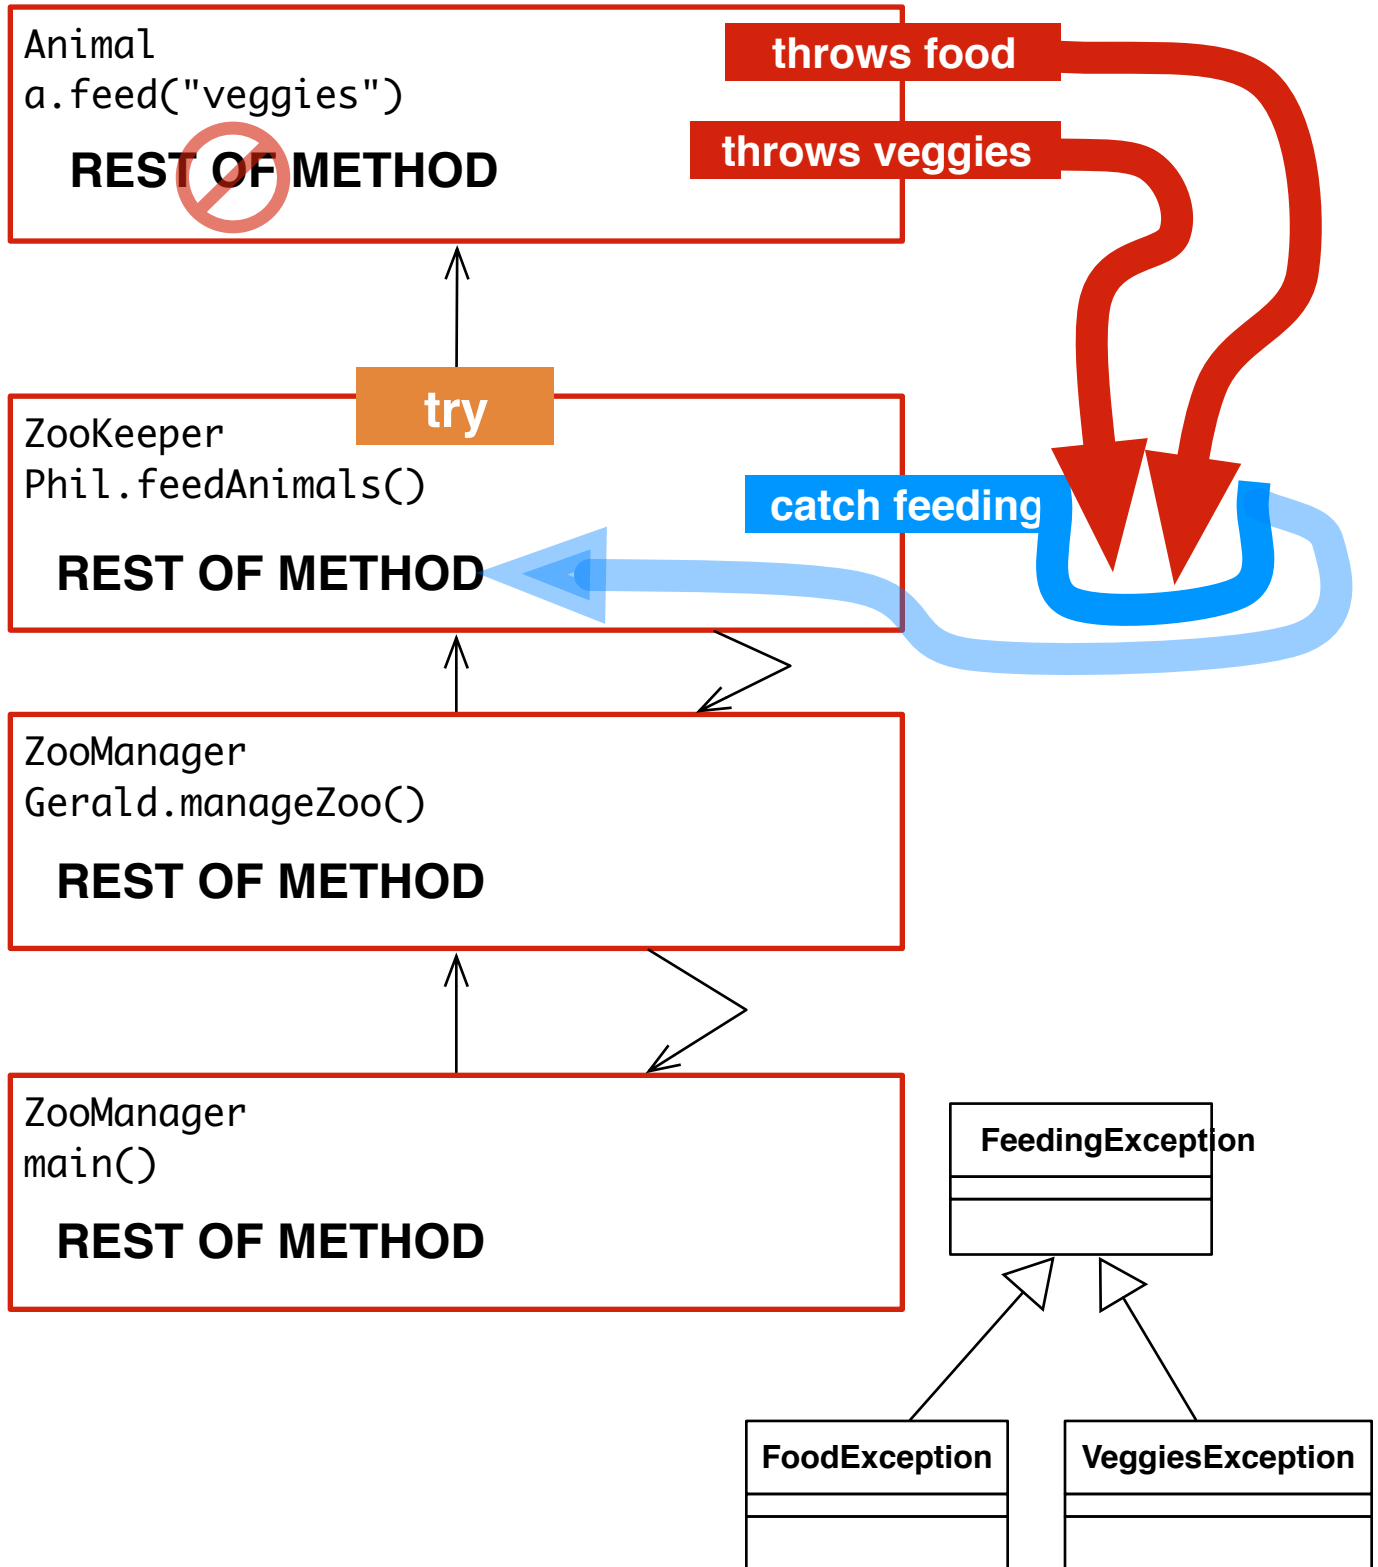

throw it further from within the catch
(or throw something different)

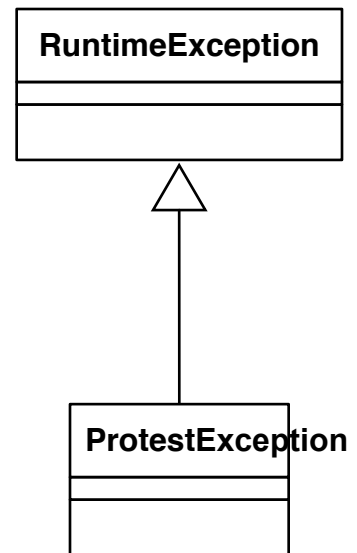

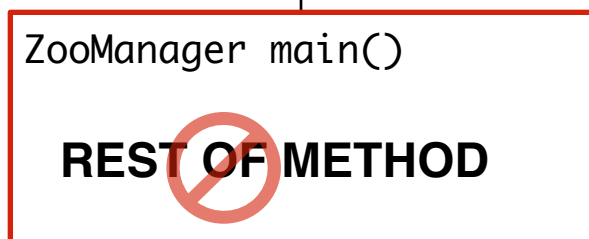

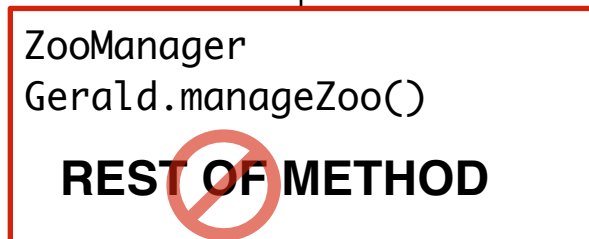

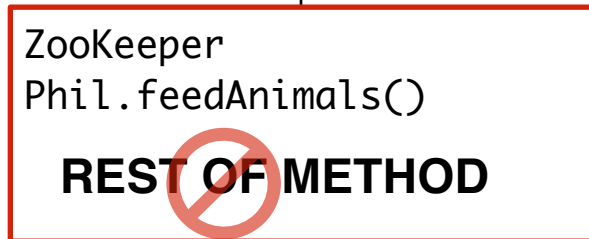

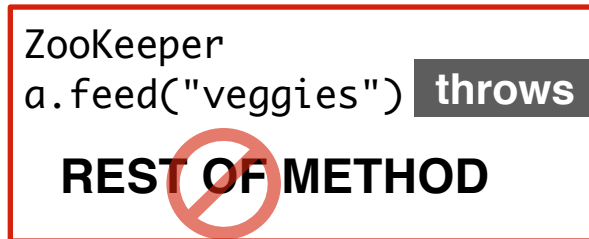

throw different exceptions
catch them separately

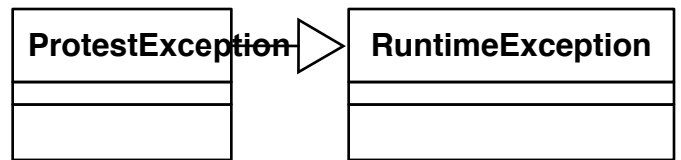

throw different exceptions
catch them together!

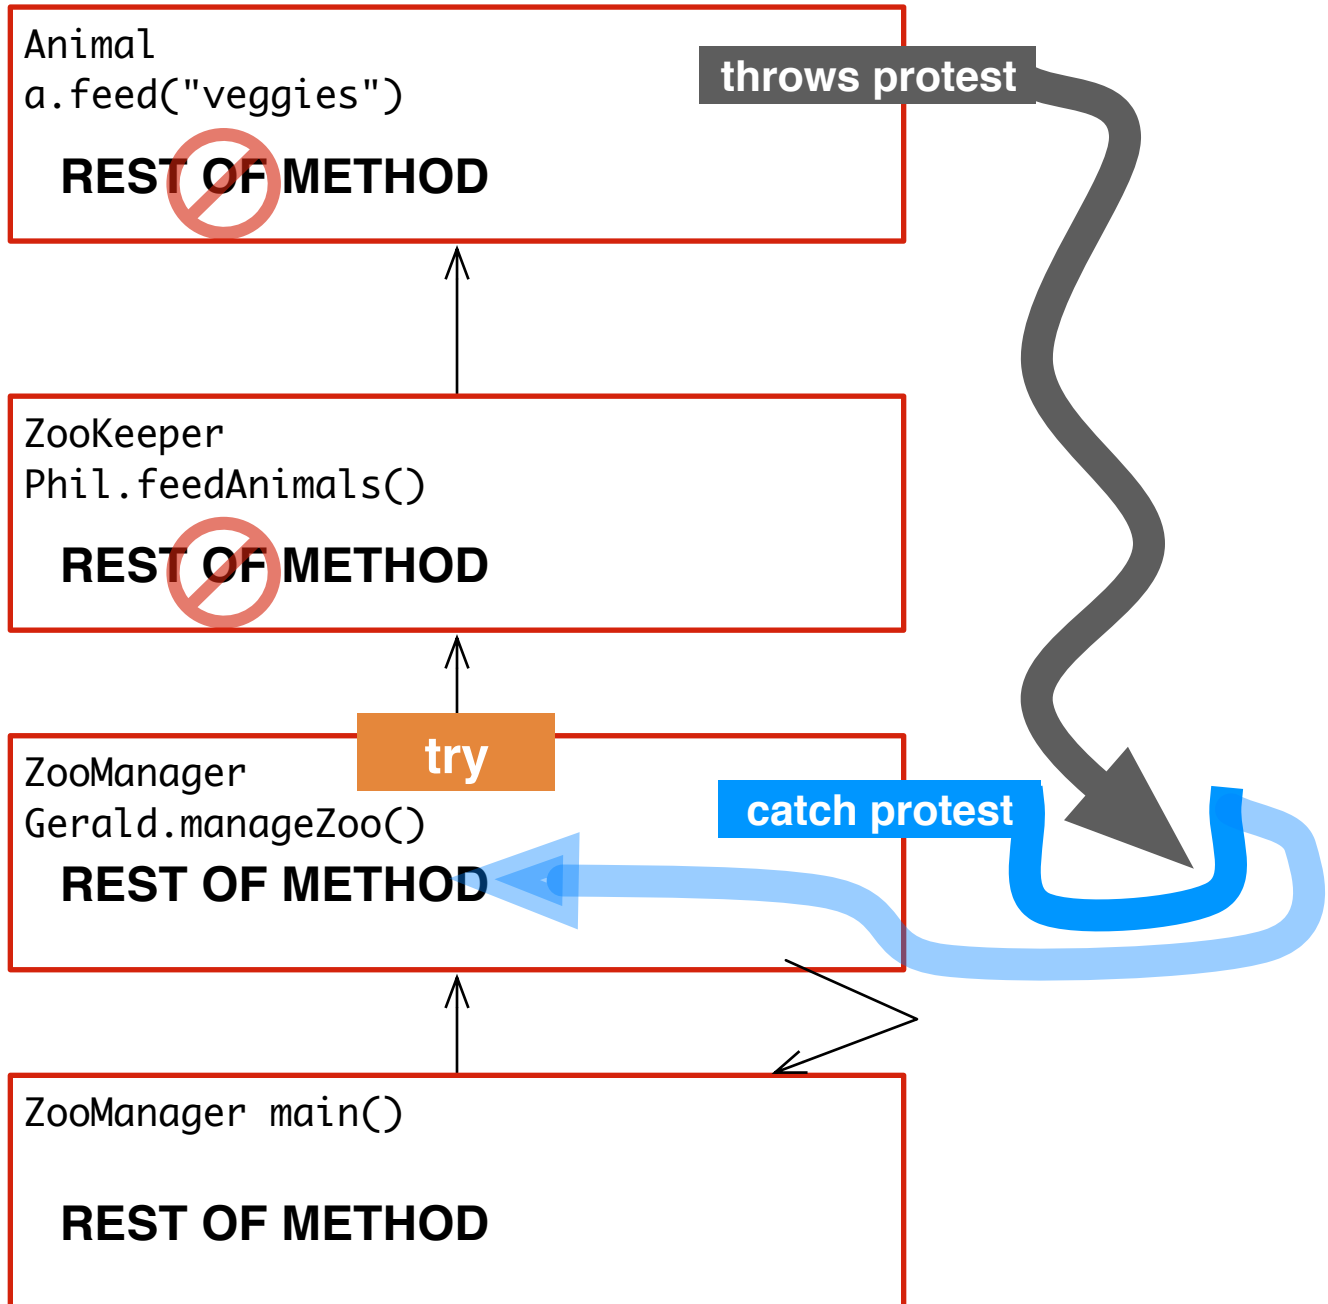

throw an unchecked exception
don't catch it anywhere

command line...

Throw an unchecked exception; catch it later

command line...

Finally executes no matter what
